

Do You Have Doubts About the Science Behind This Global Pandemic?

Who is dying of covid?

For most people covid-19 is no more dangerous than the flu. 99.8% of those who contract the virus survive it. The average age at death of those dying with covid-19 is above 82 years – greater than the average life expectancy in the UK. Of those who have covid-19 on their death record, **the majority had at least one pre-existing condition** which was most likely the cause of their death.

What is the result of lockdowns and restrictions?

Hospitals have been emptied for covid-19 patients that never turned up. Treatments for other patients have been delayed or cancelled. Tens of thousands of excess deaths will result from undiagnosed and untreated conditions. Lockdowns lead to loneliness and depression, a surge in mental health problems and suicides, the disruption of education, the loss of opportunities for young people, the closure of countless businesses and the loss of employment and livelihoods. As a result, more people are dying from the restrictions and lockdowns than from the virus. **Was this deliberate?**

What is the point of wearing a mask?

There is no study that proves that masks are effective in reducing the transmission of any virus in a community setting. Instead, masks reduce oxygen and increase the CO₂ intake, impair cognitive function, and can cause respiratory illnesses, oral infections, skin problems and brain damage. The masks are **a dehumanising symbolic tool for suppression and control**.

Are covid vaccines safe?

After reports of increased deaths in care homes following vaccinations, we are now confronted with the facts: On Yellow Card (from MHRA) 1,213 deaths and 859,481 adverse reactions have been registered in the UK by 19 May 2021. This may only be a small percentage, as not all cases are reported. The covid-19 vaccinations are still experimental and have only been approved under emergency provisions. Full long-term trial results for these are not due until 2023. The manufacturers point out that the vaccines do not confer immunity and it is still possible to contract covid after being vaccinated and that mask wearing and social distancing must still be observed. Given all that we now know about these “vaccines”, with people dying, **are we witnessing a silent genocide?**

Do we need a vaccine certification or vaccine passport?

If you have read the above, you will understand that a vaccine pass is not only unnecessary, it is also a gross violation of our freedom and our right of movement. We should **never let it happen!**

“Three weeks to flatten the curve”, they said. It’s been now over a year of lockdowns and restrictions. And with the announcement of further years of mask wearing and social distancing – bad for our physical, mental and societal health – **there’s no end in sight**.
